INTRODUCTION

ASEAN Undergraduate Scholar & Turing AI Scholar pursuing a Bachelor of Computing (Hons) in Data Science and Artificial Intelligence at Nanyang Technological University. Award-winning AI Undergraduate (VOAI First Prize, IOAI Bronze Medalist) with a deep foundation in machine learning architectures, generative models, and competitive programming. Experienced in architecting robust LLM agent harnesses, deploying industrial-scale computer vision pipelines, and optimizing algorithmic problem sets.

EDUCATION

Jul 2026 - Jul 2030 **Nanyang Technological University (NTU), Singapore**
Bachelor of Computing (Hons) in Data Science and Artificial Intelligence
- **Honors:** Turing AI Scholars Programme (TAISP) & NTU Honours College, ASEAN Scholar

Aug 2025 - Feb 2026 **VNU University of Engineering and Technology**
Bachelor in Artificial Intelligence (Gap Year Coursework)
- Engaged in rigorous foundational coursework covering neural network optimization, data structures, and advanced AI algorithmic theory.

2022 - 2025 **High School for Gifted Students, HNUE**
High School Diploma (Informatics)

PROFESSIONAL EXPERIENCE

Sep 2025 - Present **SkillPixel Instructor (Part-time)** | *SkillPixel*
- Designed comprehensive ML, AI, and math curricula tailored for national AI Olympiad preparation.
- Instructed students to strengthen mathematical foundations and master advanced AI model architectures.

Aug 2025 - Feb 2026 **AI Research Assistant** | *UET Research Lab*
- Conducted large-scale empirical experiments across Transformer-based and CNN architectures, systematically evaluating loss landscapes and hyperparameter configurations to optimize convergence rates.
- Preprocessed multidimensional datasets and fine-tuned PyTorch models, establishing highly reproducible baseline research pipelines for ongoing academic studies.

Aug 2025 **R&D Department Intern** | *Narobit*
- Engineered a high-throughput Computer Vision pipeline using PyTorch and OpenCV for real-time industrial quality assurance on manufacturing lines.
- Deployed lightweight object detection architectures optimized with ONNX Runtime, achieving low-latency inference for defect and anomaly detection while maintaining strict precision-recall requirements under variable environmental constraints.

ACADEMIC ACHIEVEMENTS

Aug 2025 **International Olympiad in Artificial Intelligence (IOAI)**
- **Bronze Medalist** in a premier global competition evaluating end-to-end ML, CV, and NLP pipelines.
- Ranked 95/284 (Individual), 1st in Team Contest Simulation by engineering robust evaluation scripts, and 5th in Real-time Run through highly optimized inference execution.

May 2025 **National & Regional AI Olympiads**
- **First Prize** – National AI Olympiad for High School Students (VOAI 2025)
- **Bronze Medal** – AI Challenge, Central Vietnam and Highlands Olympiad 2025

2025 **Competitive Programming (ICPC)**
- **26th Place** – ICPC Asia HCMC Regional Contest (Premier global algorithmic competition)
- **32nd Place** – ICPC Vietnam National Programming Contest

PERSONAL PROJECTS

Oh My OpenAgent
GitHub

Role: Maintainer (Joined Dec 2025) | **Tech Stack:** Agent Harness

- Maintained and optimized a highly popular open-source coding agent harness (66k+ stars) designed to execute complex, multi-step engineering tasks across large-scale codebases.
- Engineered robust context-window management and state-tracking mechanics to prevent token exhaustion during long-horizon autonomous tasks.
- Integrated strict JSON-based tool-calling schemas, enabling LLMs to safely interface with local file systems, bash environments, and external APIs in an "ultrawork" execution loop.

FaceLogix
GitHub

Role: Developer | **Tech Stack:** Python, PyTorch, Facial Recognition Models

- Architected an enterprise-grade attendance management system by cascading high-accuracy face detection and feature extraction neural networks into a unified pipeline.
- Implemented high-dimensional vector similarity search for face matching against large-scale employee embedding databases.
- Integrated liveness detection heuristics and spoof-resistant mechanisms to prevent unauthorized access via static imagery or video playback.

ZenFocus
GitHub

Role: Developer | **Tech Stack:** Vite, React, AI Integration

- Engineered a state-driven, high-fidelity Pomodoro web application combining modern UI mechanics with optimized React lifecycles to ensure precise background timekeeping.
- Integrated third-party LLM APIs via custom prompt engineering to automatically decompose complex user goals into atomic, actionable sub-tasks dynamically reflected in the UI state.

LumifaceWeb
GitHub

Role: Developer | **Tech Stack:** React, Vision-Language Models (VLM)

- Developed a responsive web application leveraging Vision-Language Models (VLMs) to process client-side images for automated, high-accuracy dermatological and beauty analysis.

LICENSES & CERTIFICATIONS

Jan 2024 **Intro to Deep Learning** – Kaggle

Jan 2024 **Intro to Machine Learning** – Kaggle

TECHNICAL SKILLS

Specializations: Machine Learning, Computer Vision, Generative Models
Core Competencies: Algorithm Design, Problem Setting (Polygon)
Programming Languages: Python, JavaScript, C++
Frameworks/Tools: PyTorch, React, Vite, Claude Code, Codex
Platforms: Git, GitHub, GitLab, Linux, Codeforces
